Airway Station Overview and Objectives

1. Enhancement of assessment skills in the healthy and sick newborn
2. Enhancement of resuscitation skills with concentration in respiratory support and stability using respiratory equipment and adjuncts:

- Manual Resuscitators
  - Types
    - Flow Inflating Bags
    - Self Inflating Bags
    - “T” piece Resuscitators
  - Use
    - Benefits
    - Limitations
    - Practice

- Endotracheal Intubation
  - Preparation
    - Equipment needed and operational checks
    - Sizing and positioning
  - Procedure
    - Visualization
    - Tube insertion
    - Verification
    - Securing

- Other airway adjuncts
  - Oral airway
    - Sizing and placement
  - LMA
    - Sizing and placement
  - NCPAP and High Flow Cannula
    - Indication
      • Benefits
      • Limitations
      • Set-up discussion
